

Scribe PDF

EVERY PDF TASK · ONE APP

32 tools. One document workflow.

From a stray scan to a signed, searchable, shareable document, Scribe PDF is the complete toolkit for everything that happens to a PDF along the way.

Everything a PDF ever needs to become.

Most apps do one or two things to a PDF and leave the rest to somebody else. Scribe PDF was built the other way around: every stage of a document's life, creating it, cleaning it up, protecting it, marking it up, presenting it, and shrinking it back down, lives in one app, with the same clean interface throughout.

● Create & Organize	8 tools
● Read & Extract	7 tools
● Protect & Secure	6 tools
● Sign & Mark Up	5 tools
● Present & Listen	4 tools
● Optimize	2 tools

Why Scribe PDF.

Plenty of apps can merge a PDF or add a watermark. Here is what actually makes Scribe PDF worth switching to.

All-in-one

Every one of the 32 tools above lives in a single app, so there is no more juggling six different converters, scanners, and editors for one document.

Native, not a wrapper

Built for iPhone, iPad, and Mac specifically, so it opens fast, feels at home on each platform, and never behaves like a website pretending to be an app.

One interface, learned once

Every tool shares the same clean design language, so there is nothing new to figure out each time you reach for a different feature.

The full document lifecycle

From a stray scan to a signed, searchable, shared file, Scribe PDF covers every stage of a document's life, not just one slice of it.

Vision-powered accuracy

OCR built on Vision reads scanned pages properly, turning images of text into real, searchable text rather than a rough guess.

Real protection

Encryption, redaction, and metadata stripping that actually remove what shouldn't travel, not a checkbox that just looks like security.

Speaks your language

The app and every tool are localized into 12 languages, including Arabic, Urdu, Chinese, and Japanese, each written for that market, not just translated.

Create & Organize

Build documents from anything you have, then get every page in the right order.

Merge PDFs

Twelve files, one deadline. Scribe PDF merges them into a single, sensible document in a few taps.

Split PDF

Fifty pages, one contract you actually need. Scribe PDF splits it apart cleanly.

Images to PDF

A folder of photos is not a document. Scribe PDF turns them into one clean PDF, in order.

Clipboard to PDF

Copied something? Turn your clipboard into a finished PDF in one tap.

Page Organiser

Reorder, delete, and duplicate pages, finally order instead of forty identical filenames.

Rotate Pages

Someone scanned it sideways. Rotate every page back to sane in seconds.

Crop Pages

Too much margin, not enough document. Crop pages precisely to what matters.

Reverse Pages

Scanned back to front? Reverse, shuffle, or reorder until it finally makes sense.

Read & Extract

Pull the words, the pages, and the data out of any PDF, searchable, exportable, usable.

OCR

A scanned page isn't searchable, until it is. Vision-powered OCR turns images into real text.

Extract Text

Need the words, not the whole document? Pull every bit of text out as a clean .txt file.

Extract Pages

Three pages matter out of three hundred. Export exactly those, as crisp PNGs or JPEGs.

Table Extraction

A table buried in a PDF, waiting to become a spreadsheet. Find it, export it, cleanly.

Find in PDF

Somewhere in two hundred pages is the line you need. Find it across every page, instantly.

Document Stats

Word count, readability, structure: the numbers behind the document, without the guesswork.

PDF to Markdown

Trapped in a PDF, your text wants to be usable again. Convert to clean Markdown or HTML.

Protect & Secure

Lock what's private, remove what shouldn't travel, and prove exactly what changed.

Password

Some documents are nobody's business. Encrypt or decrypt them properly, real protection.

Redact

Before you send that file, black out what shouldn't be seen. Gone for good, not just covered.

Watermark

Put your name on it, literally. Add text watermarks in seconds, on every page.

Metadata

Title, author, subject, keywords: the details that quietly matter. Edit every one properly.

Strip Metadata

Your document doesn't need to announce who wrote it, when, or where. Strip that trail clean.

Bates Number

Legal teams know the drill. Stamp sequential Bates numbers across every page, precise and consistent.

Sign & Mark Up

Fill it, sign it, stamp it, annotate it: make a PDF ready to send.

Fill & Sign

Forms were made to be filled, not printed and re-scanned. Fill the fields, add your signature.

Stamp Library

"Approved." "Confidential." "Void."
Tap once, look official.

Annotate

Highlight, comment, mark it up: a genuine conversation with your documents, no sticky notes.

Headers & Footers

Page numbers, dates, and a little polish, added across every page, automatically.

Compare PDFs

Two versions, one question: what changed? Compare them visually, side by side.

Present & Listen

Turn any PDF into a talk, a room-ready deck, or something you can listen to.

Slideshow

A PDF isn't a deck, until it is. Present your pages full-screen, ready for any room.

Presenter Mode

Laser pointer, drawing tools, full control. Any PDF, ready to command a room.

Read Aloud

Too busy to read it? Let it read to you. Any PDF, turned into speech.

PDF to Audiobook

Your commute could be productive. Convert any PDF into an MP3 or M4A audiobook.

Optimize

Same document. Less weight, one clean layer.

Compress PDF

That 40MB PDF isn't impressing anyone. Compress it down to size, same document, less weight.

Merge Layers

Optional-content layers are great, until they're not. Flatten them into one clean page.
